Art Unit: 2652

1. This application contains claims directed to the following patentably distinct species of the claimed invention:

Group I : Claims 1-2 and 5, figures 1-4 (stationary magnetizing layers independently provided separately between each said conductive layer and each lower magnetic layer ...)

Group II : Claims 1, 3 and 5, figures 1-3D and 5 (stationary magnetizing layers provided continuously and in common between each ...)

Group III: Claims 1, 4 and 5, figures 1-3D and 6 (stationary magnetizing layers for using of each of said upper magnetic layers as stationary layers are respectively and independently provided separately between each of said upper magnetic layers and each of said independently upper electrodes of ...)

Group IV: Claims 6 and 7, figures 8A-8C (series ... each long side of each of said magnetic tunnel junction structures is arranged in parallel and mutually opposing.)

Group V: Claims 8-10, figures 9A-9B (series ... the long sides of said rectangular are perpendicular to the direction of orientation of said plurality of magnetic tunnel junction structures.)

Group VI: Claims 11 and 12, figures 10A and 10B (series ... said plurality of magnetic tunnel junction structures are arranged linearly in the direction of each long side and in two rows in the direction of each short side)

Art Unit: 2652

Group VII: Claims 13 and 14, figure 21 (matrix, ... said plurality of magnetic tunnel junction structures linearly in the longitudinal or horizontal direction of said matrix, and electrically connecting so as to turn around at both ends of said matrix)

Group VIII: Claims 13 and 15, figure 22 (matrix, ... said plurality of magnetic tunnel junction structures, and the direction of the long sides of the rectangle of each of said magnetic tunnel junction structures coincides with the direction of the long sides of the rectangle of said matrix)

Applicant is required under 35 U.S.C. 121 to elect a single disclosed species for prosecution on the merits to which the claims shall be restricted if no generic claim is finally held to be allowable. **Currently, claim 1 is generic.**

Applicant is advised that a reply to this requirement must include an identification of the species that is elected consonant with this requirement, and a listing of all claims readable thereon, including any claims subsequently added. An argument that a claim is allowable or that all claims are generic is considered nonresponsive unless accompanied by an election.

Upon the allowance of a generic claim, applicant will be entitled to consideration of claims to additional species which are written in dependent form or otherwise include all the limitations of an allowed generic claim as provided by 37 CFR 1.141. If claims are added after

the election, applicant must indicate which are readable upon the elected species. MPEP § 809.02(a).

Should applicant traverse on the ground that the species are not patentably distinct, applicant should submit evidence or identify such evidence now of record showing the species to be obvious variants or clearly admit on the record that this is the case. In either instance, if the examiner finds one of the inventions unpatentable over the prior art, the evidence or admission may be used in a rejection under 35 U.S.C. 103(a) of the other invention.

2. Applicant is advised that the reply to this requirement to be complete must include an election of the invention to be examined even though the requirement be traversed (37 CFR 1.143).

3. Applicant is reminded that upon the cancellation of claims to a non-elected invention, the inventorship must be amended in compliance with 37 CFR 1.48(b) if one or more of the currently named inventors is no longer an inventor of at least one claim remaining in the application. Any amendment of inventorship must be accompanied by a request under 37 CFR 1.48(b) and by the fee required under 37 CFR 1.17(I).
